- Experienced & Trained Servo Staff
- Documented Testing Procedures
- Detailed Cause of Failure Reports
- 24 Hour Emergency Service
- Service All Brands of Servos
- Feedback Repair & Calibration
- Free Estimates
- Full Load Testing
- 3 Year Warranty

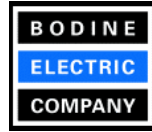

By combining our traditional electric motor expertise and methods with our highly trained engineers, we are able to offer servo motor repair that is second to none. Whether it's a faulty encoder, grounded windings, damaged shaft or worn keyway, Matlock has both the capability and specialized equipment to perform thorough servo motor repair and testing under one roof.

Each servo we repair is tested electrically and mechanically using the latest technologies and test equipment. This allows us to insure defective and worn components are rebuilt or replaced. Feedback devices such as encoders, resolvers, and tachometers are all calibrated to the OEM standards. Most repair shops do not address feedback devices; this can lead to additional costs and unplanned/unwanted downtime. Static and dynamic tests are also performed to verify that all repairs meet or exceed OEM specifications.

If you demand absolute reliability, cost-savings, rapid turn around times, and proven expertise, turn to Matlock for all of your servo motor needs.

Matlock Electric Co., Inc.
2780 Highland Ave. Cincinnati, OH 45212
